

W08-P1 create a express web server with route /

W08-P2 connect MongoDB server

The screenshot shows Visual Studio Code with two files open: `server_81.js` and `connect_81.js`. The `server_81.js` file contains the following code:

```
11 import connectDB_81 from './db/connect_81.js'
12
13
14 app.get('/', (req, res) => {
15   res.send('Welcome yangpeicih 209410181');
16 });
17
18 const port = process.env.PORT || 5000;
19
20 const start = async () => {
21   try {
22     await connectDB_81(process.env.MONGO_LOCAL
23       console.log('Connecting to MongoDB');
24     });
25
26     app.listen(port, () => console.log(`server
27   } catch (err) {
28     console.log(err);
29   }
30 }
31
32 start();
33
```

The `connect_81.js` file contains the following code:

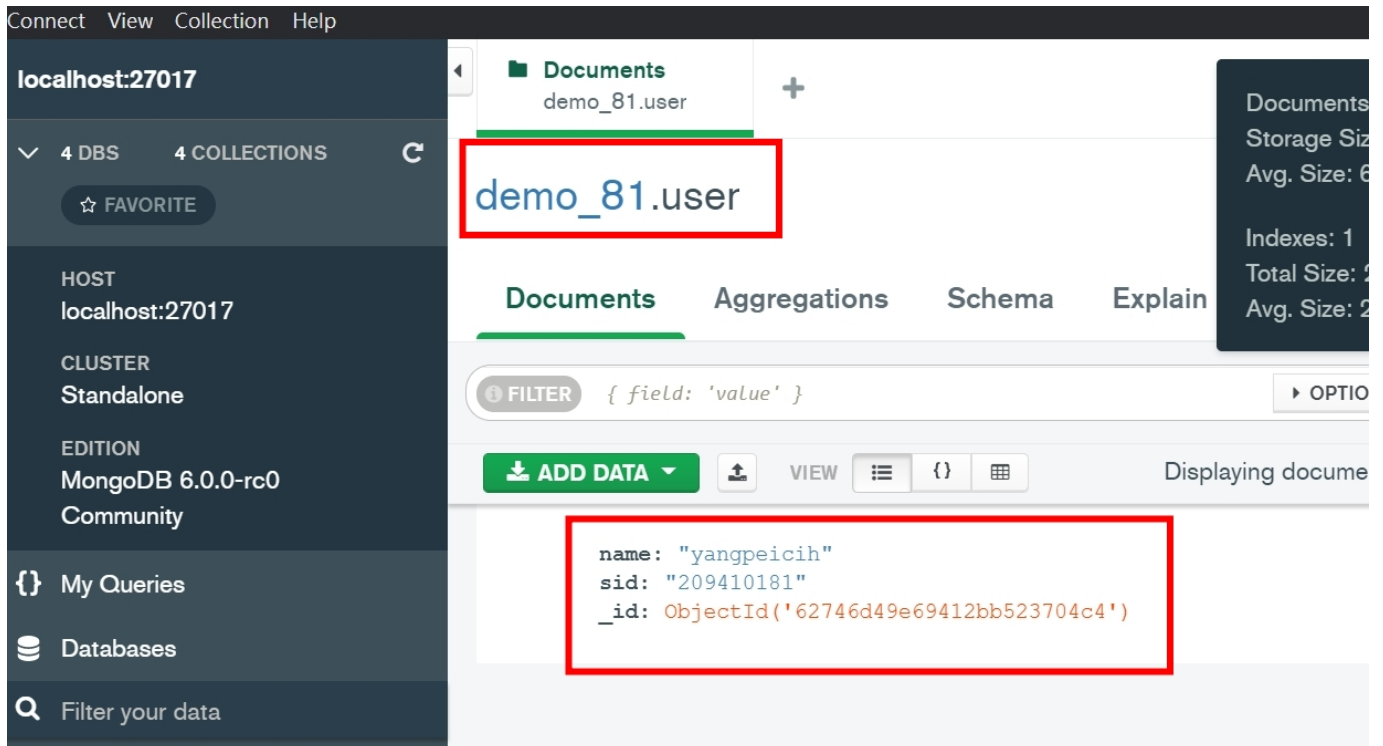

```
1 import mongoose from 'mongoose';
2
3 const connectDB_81 = (url) => {
4   return mongoose.connect(url);
5 }
6
7 export default connectDB_81;
```

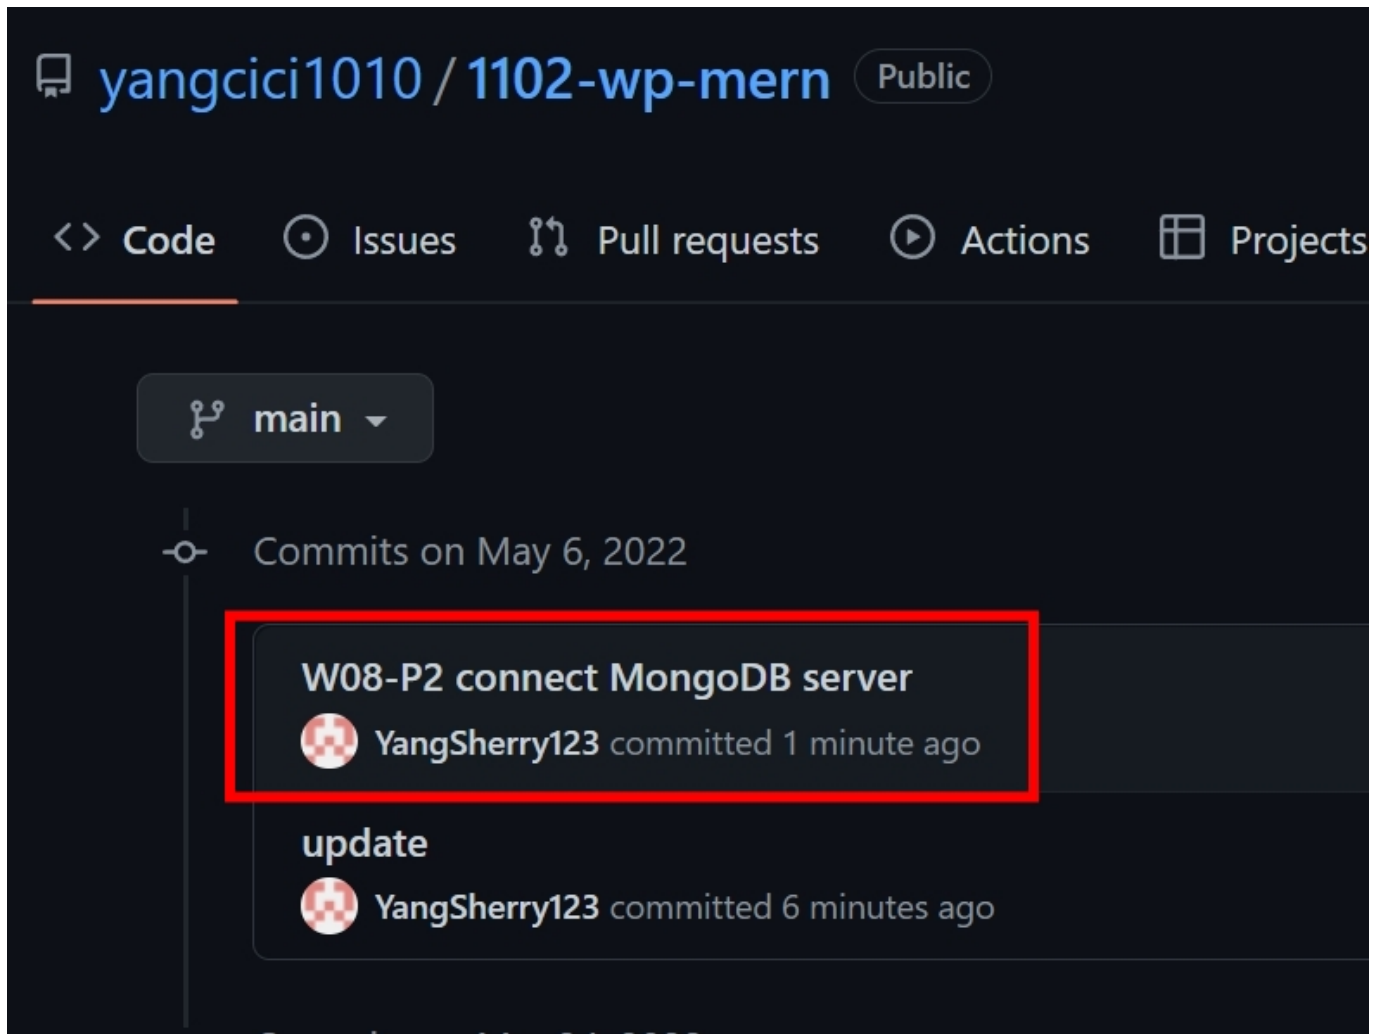

The terminal output shows the following commands and results:

```
yan10@LAPTOP-330A84B0 MINGW64 ~/1102-wp-mern/1102-wp-mern-81 (main)
$ npm start

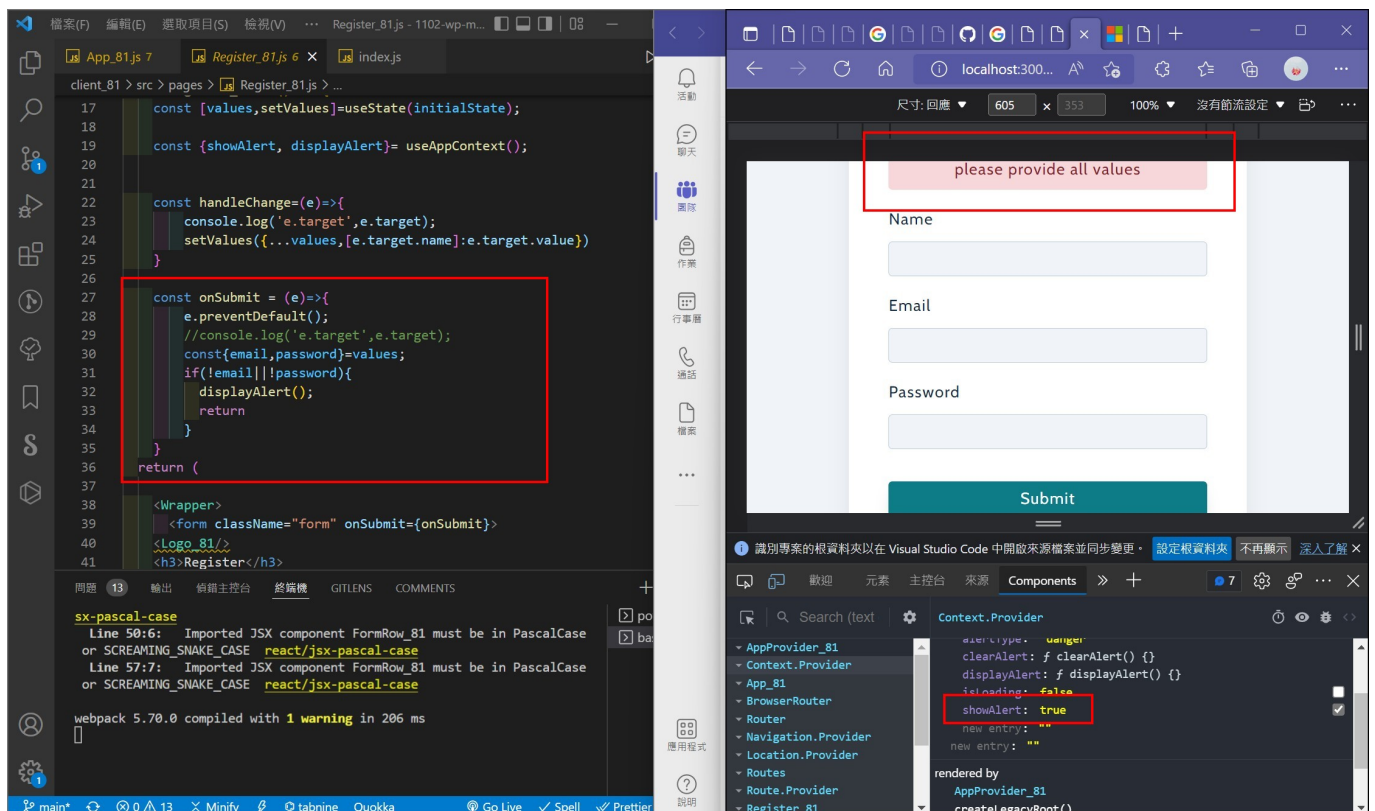

> 1102-wp-mern-06@1.0.0 start
> node server 81.js

Connecting to MongoDB
server is running on port 5000
```

W08-P4 displayAlert in Register_xx.js, show state in AppProvider_xx

W08-P5 W08 step record
